Step One (1/2): [Simple instruction/Action command]

(subtitle / subdescription)

[Description of this tool]

Some instructions of some kind (e.g., sample ID)

No submissions received, it seems...

Step Two (2/2): Upload [insert expected file types (e.g., clinical data .xlsx files)].

Click "Initiate Pipeline" to launch analysis.

Uploading from multiple directories? Or after reset? ➡ Click "Append"

Drag/Drop **1** file(s) here —or— Select from your computer

(OTHER INFO/NOTE)

(...NOTE DETAILS / DESCRIPTION...)

(Optional supplementary message...)

➡ APPEND

🔄 REFRESH UPLOAD LIST

✖ RESET UPLOADS

Logged in as: John

— INITIATE PIPELINE —

⚡ [Est.] Required Execution Time ≤ = X s (per input sample)

⚠ Cautionary notes / hints / advice / warnings - #1

⚠ Cautionary notes / hints / advice / warnings - #2

—CLEAR CURRENT QC RESULTS OUTPUT—

💡 Hint: Check the log! It may be very informative...

🔄 Refresh (By selecting the "Download Output Files" or "Log Files" option below for live updates of all +background+ app execution activity.)

Download Output Files

Choose from the listed file-types to limit downloads (or view all)

E.g., Select LOG to view the audit trail of your current session.

SHOW RELEVANT FILES

Output File(s) Download Links

[Select an output filetype(s) category.]
